Introduction

The build list of your engine, found on the front page of this parts book, provides a unique reference to the components fitted to your engine; therefore this parts book is only applicable to this particular engine

Always quote your build list and engine serial number when contacting your Perkins outlet.

How to use your Parts Book

This parts book has been designed to provide you with all the information you need to identify parts to service your engine. There are several features within the book to make it easy to find the parts you require.

Front Page

This lists your build list number and the date of publication of this book

Symbol Descriptions

Provides a quick reference guide to the symbols used within the book.

Engine Breakdown

Use this to identify all the major sections of your engine and the relevant pages within the book.

Parts Lists & Illustrations

This section shows each major section of your engine broken down into individual part numbers along with an associated illustration for identifying the parts you require.

The illustrations used in this parts book are representational only and should only be used for identification purposes.

For fitting instructions please refer to your engine Service Manual.

Parts Index

Using either the part number or description of the part you require this section will help you locate the page within the **Parts Lists & Illustrations** section where the part appears.

Parts kit instruction 218

Power Exchange Long Engines

This power exchange long engine is shipped with a sump, timing case and cover, cylinder hea valve train with a protective cover and oil pump. The long engine is shipped with the number c cylinder at top dead centre. This is to allow easier fuel pump assembly and timing. In all applic the fuel pump drive gear will need to be transferred to the new long engine.

In some applications the original engine will have a different sump and oil pickup tube. These be transferred to the new long engine and the components supplied shall be returned on the c engine. A complete upper and lower gasket kit are supplied with each long engine to ease ass

A plate on the side of the block is stamped to indicate the crankshaft and bore size of the long Crankshaft identification is also marked on the first lobe. The following suffixes apply: A = 0.0 undersize, B = 0.020 undersize, C = 0.030 undersize.

The assembled long engine is built to the latest specification and may have improved internal features when compared to the original engine. To identify components, the long engine numb stamped on the engine serial number plate and must be used when the long engine compone ordered.

To ensure that components moved from the original engine to the new long engine continue t correctly identified, it is important that the original engine serial number and TPL number are stamped onto the long engine serial number plate when the engine is fully assembled.

For 1000 series engines; the 1.6mm sump joint must only be used with pressed steel sumps. 0.8mm joint must only be used with cast sumps.

For 1000 series engines; the rocker cover joint, part number 3681 A021, must only be used w aluminium top covers.The rocker cover joint, part number 3681 A032, must only be used with top covers.

Some timing cases do not allow adjustment of the front seal position. If the crankshaft pulley h groove worn in the spigot, it can be reconditioned with a speedi-sleeve. For 1000 series, use s sleeve part number 21820104, refer to the workshop manual.

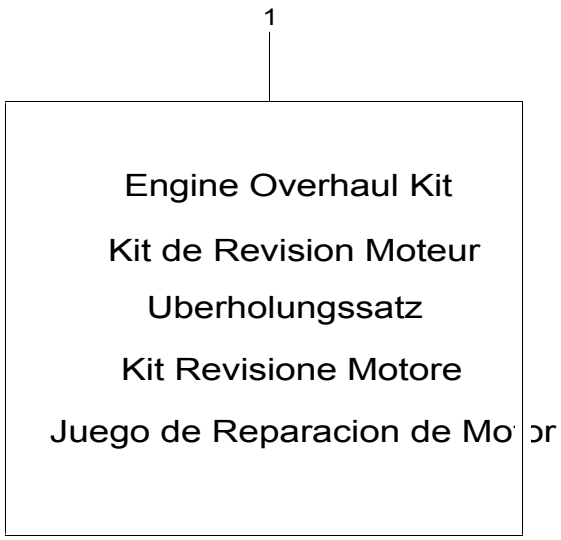

End
